Google Sheets Integration in n8n

Instructions for configuring and testing the “Append Customer Row” node.

2. Select the Google Sheets Node

Search for and select the **Google Sheets** node.

3. Rename the Node

Rename the node to **Append Customer Row**.

4. Configure the Node

Double-click the node and configure the following fields:

a **Credential Type:** Select your configured Google Sheets API credentials.

b **Resource:** Select Row.

c **Operation:** Select Append (or Append Row).

d **Document:** Paste your copied Spreadsheet ID, or search for **N8N Test Spreadsheet**.

e **Sheet:** Select Sheet1 (or whichever tab name you used).

f **Fields to Map:** Under column mapping, match the sheet columns as follows:

Name:

```
{{ $json.customerName }}
```

Email:

```
{{ $json.customerEmail }}
```

Status: Enter the static text **Pending**.

5. Test the Node

Close the configuration panel. Hover over the node and click the **Test step** icon to append the row. Open your Google Sheet and verify that the new row has been added.
